migration

February 8, 2019

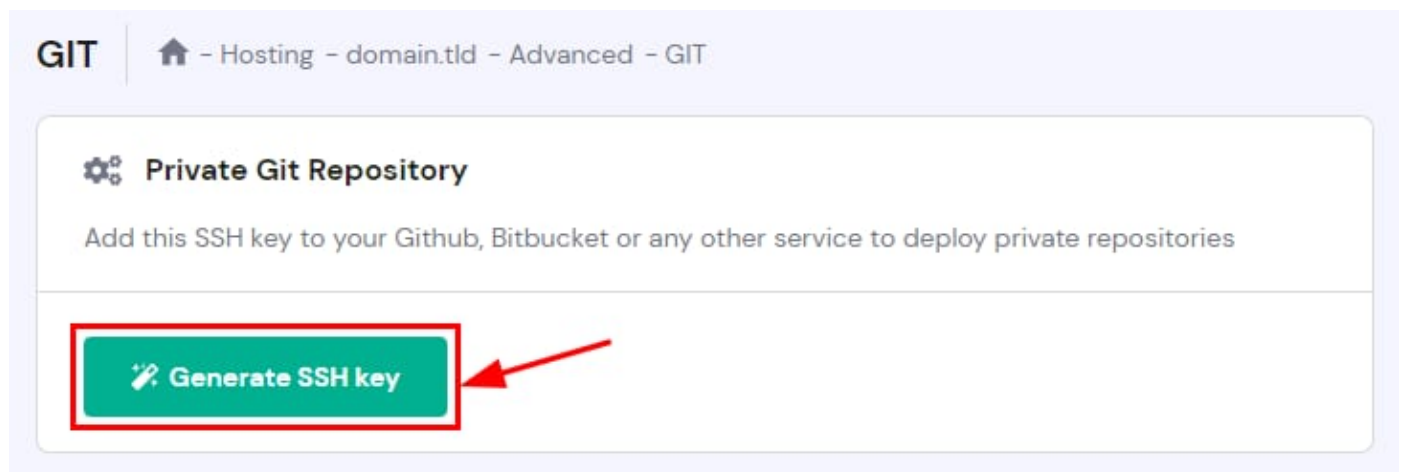

Adding your SSH key to GitHub or Bitbucket, will allow you to deploy from a private repository and enable seamless repository access. Just follow these steps:

Step 1 – Generate an SSH Key

Go to [Websites](#) → **Manage**. In the left sidebar, search for GIT and click on it:

Next, click on **Generate Key**:

Once generated, **copy** it in order to add it to your GitHub or Bitbucket account in the next step.

Step 2 – Add the SSH Key

Check the instructions according to your preferred repository service:

GitHub

After logging into [GitHub](#):

1. Click your profile photo and select **Settings**
2. In the user settings sidebar, click **SSH and GPG keys**
3. Click **New SSH key** or **Add SSH key**
4. In the **Title** field, add a descriptive label for the new key
5. Paste your key into the **Key** field
6. Click **Add SSH key**
7. If prompted, confirm your GitHub password

Bitbucket

After logging into [Bitbucket](#):

1. Go to **View Profile**
2. Click on **Settings**.
3. Go to the **Access Keys** option and click on **Add key**
4. Paste your key and save the changes
