FTP (File Transfer Protocol) is a way to transfer files between computers over the Internet. The FTP protocol is used to upload or download files to and from a remote server, such as your hosting, in a secure and reliable way.

NOTE

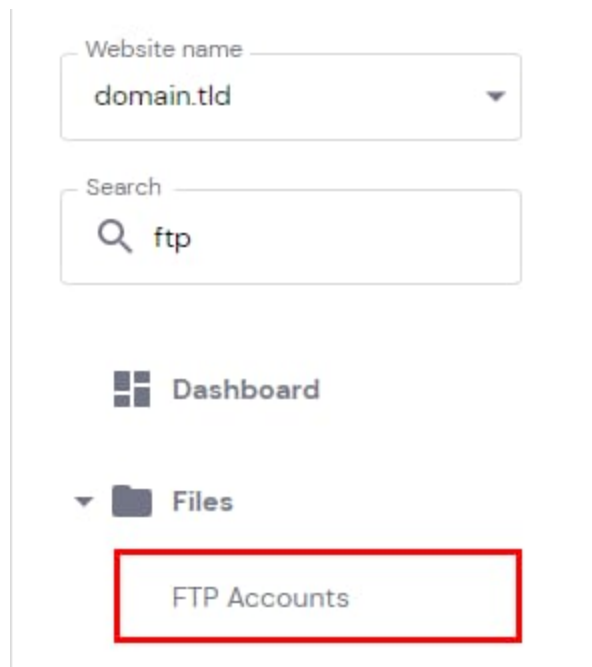

FTP is not available for websites created with [Hostinger Website Builder](#)

To use FTP, you will need an **FTP client**. Our recommendation is [FileZilla](#), so make sure to install the **client version** before proceeding with the next steps 🖱️

Step 1 – Connect to Your Server

Option 1 – Using FTP

Find your **FTP details** by opening [Websites](#) → **Dashboard**, searching for **FTP Accounts** on the sidebar and clicking on it:

There you will be able to see your FTP information, that is:

- **FTP Host:** The IP from the FTP Accounts section
- **User:** Your FTP Username

- **Port:** 21

Next, enter your FTP information on the FTP client and connect to your account. You can find a detailed guide here: [How to Connect to Your FTP Account](#).

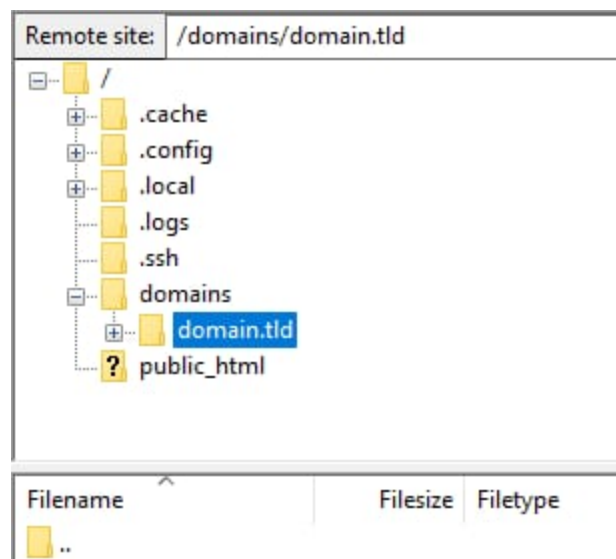

Option 2 – Using SFTP

SFTP (Secure File Transfer Protocol) is used to transfer files over a secure channel, providing an additional layer of security to FTP by encrypting the data before transmitting it over the internet, preventing unauthorized access.

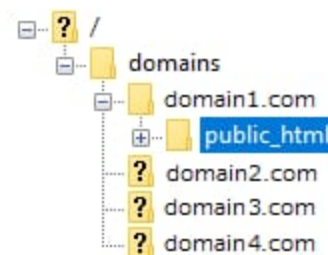

If you have a **Premium or higher** hosting plan, you can use an **SFTP** connection to upload your files. You can find the detailed process in the following article: [How to Connect With SFTP](#)

Step 2 – Upload Files

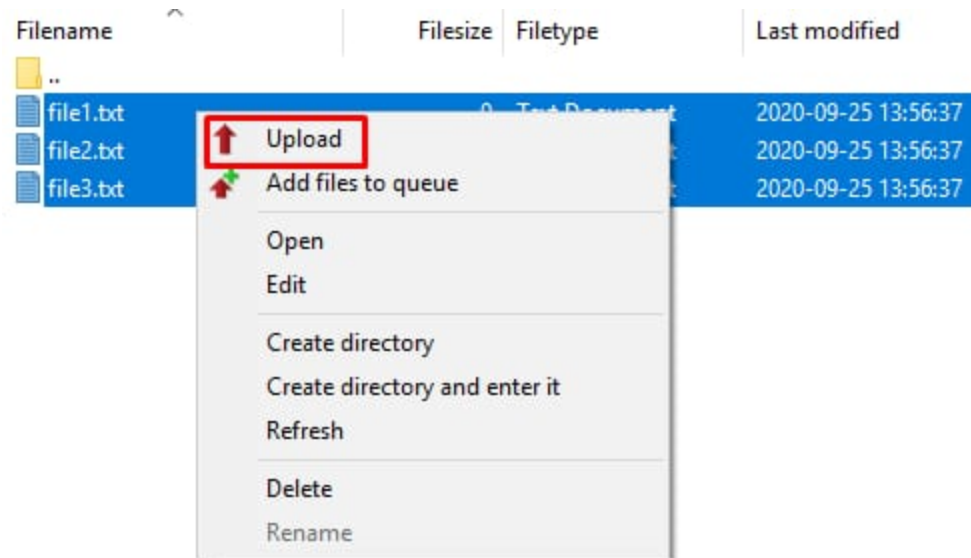

After you connect to your account, open the **public_html** folder (or the folder where you want to upload files to) that is located on the right side of the screen:

If you have several sites in one account, the path to the **public_html** folder may be different:

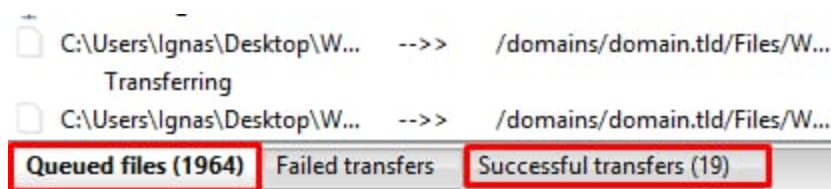

On the left side, **select the directory or files** you want to upload, right-click, and select **Upload**:

Alternatively, you can **drag the files** from your computer straight to the desired folder on FileZilla.

Once done, you will be able to see the progress live:

Once all files are transferred, your backup will be fully uploaded.
